Document: Typeset galley (published version)

Abstract

Feature stores promise to bridge experimentation and serving, but the literature is fragmented across vendors and open-source projects.

We systematically review 64 primary sources, propose a capability taxonomy, and highlight open gaps in lineage and point-in-time correctness.

Keywords: feature store, MLOps, systematic review, data management

1. Introduction

This manuscript is part of a realistic but synthetic Open Journal Systems instance used for non-production testing. The content is fictional; any resemblance to real studies is coincidental.

2. Methods

The study design, materials, and analysis described here are illustrative placeholders that mirror the structure of a genuine research article so that downstream tooling sees plausible inputs.
