Document: Typeset galley (published version)

Abstract

We report on an eighteen-month migration of a municipal records system from a CRUD architecture to event sourcing.

The case covers data backfill, auditability requirements, and the organisational change needed to sustain the new model.

Keywords: event sourcing, legacy migration, case study, public sector

1. Introduction

This manuscript is part of a realistic but synthetic Open Journal Systems instance used for non-production testing. The content is fictional; any resemblance to real studies is coincidental.

2. Methods

The study design, materials, and analysis described here are illustrative placeholders that mirror the structure of a genuine research article so that downstream tooling sees plausible inputs.
