Document: Typeset galley (published version)

Abstract

Non-deterministic seeding silently undermines benchmark comparability.

We describe a lightweight convention for seeding and recording entropy sources that makes runs byte-reproducible across machines.

Keywords: reproducibility, benchmarking, determinism

1. Introduction

This manuscript is part of a realistic but synthetic Open Journal Systems instance used for non-production testing. The content is fictional; any resemblance to real studies is coincidental.

2. Methods

The study design, materials, and analysis described here are illustrative placeholders that mirror the structure of a genuine research article so that downstream tooling sees plausible inputs.
